

ARLULA

SPACE MARKETPLACE

Access to capabilities in space is difficult because the opportunity has not been fully commercialized.

- Organisations find it very difficult to gain simple, affordable access to space.
- Corporates struggle to access new potential market opportunities as their underutilised services and assets sit in orbit.

Excess capacity

Commodifies resources

A digital commerce platform for outer space.

Aggregates customer demand

- We simplify the customer experience.
- We aggregate demand for suppliers.
- We take a fee from every transaction we facilitate.

We are starting out by manually facilitating transactions in order to prove that our model works.

ISS Ridesharing Service

- Our first capability allows organisations to conduct research and commercial activities on the ISS.
- We aggregate suppliers to provide low cost effective flight opportunities.
- We organise all integration, regulatory paperwork and legal documents.

We are working with universities and SMEs that are planning research and commercial manufacturing payloads for a 2019 mission.

Eventually customers will be able to book flight slots to the ISS online, and all the processing will be done in hours instead of months.

We plan to add more space capabilities
as we progress.
